## Conditions Report

No respiratory irritation associated with *Karenia brevis* (commonly known as red tide) is expected in this region.

## Analysis

### Imagery:

Recent ensemble imagery (MODIS Aqua, 6/16) is partially obscured by clouds along the Texas coast, limiting analysis. There are no visible patches of chlorophyll with the optical characteristics of *K. brevis* at the coast.

### Forecasts:

Forecast models based on predicted near-surface currents indicate a negligible potential transport along the coast from Port Aransas from June 16-20.

MODIS Aqua satellite chlorophyll image (06/16/18) with possible *K. brevis* HAB areas shown by red polygon(s).

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS). A text summary of the marine forecast by region is available from NWS at <http://go.usa.gov/xnRax>.
