

Gulf of Mexico Harmful Algal Bloom Bulletin

Monday, August 3, 2020
NOAA National Ocean Service
NOAA Satellite and Information Service
NOAA National Weather Service

Region: Southwest Florida

Instructions for viewing this geospatial pdf are available at: <https://go.usa.gov/xn9g2>.

Conditions Report

No respiratory irritation associated with *Karenia brevis* (commonly known as red tide) is expected in this region.

Analysis

Imagery:

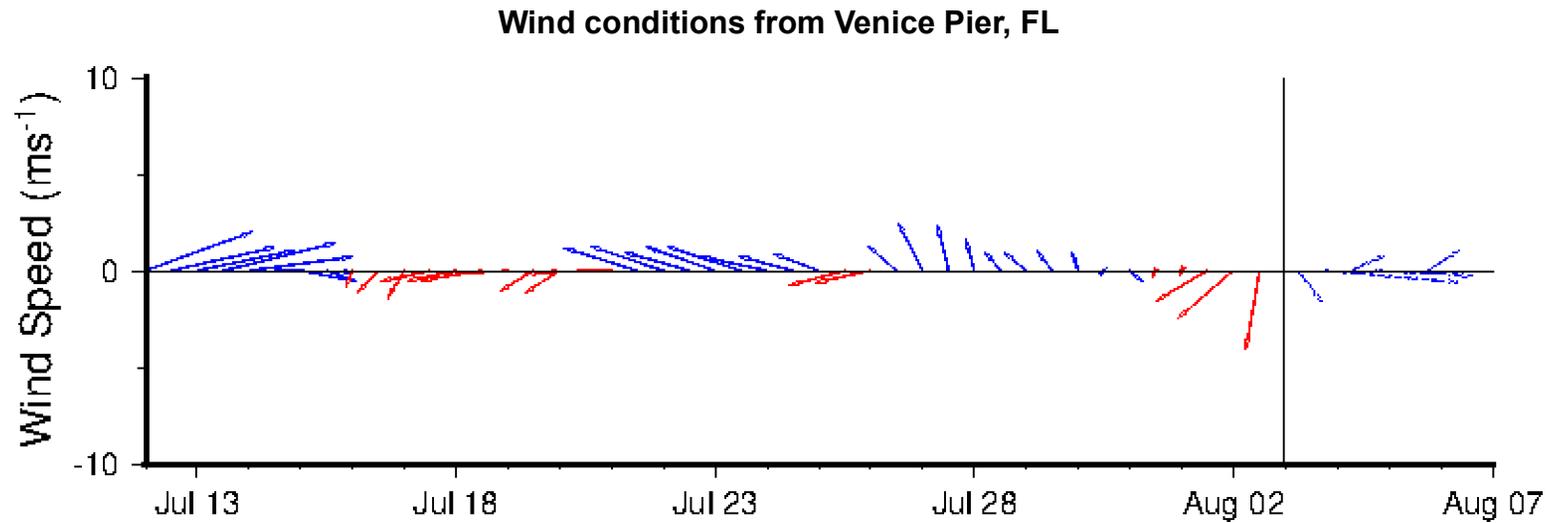

Recent ensemble imagery (VIIRS, 8/1) is partially obscured by clouds alongshore Sarasota and Charlotte Counties, limiting analysis of this region. Patches of elevated to high chlorophyll (1-13 $\mu\text{g/L}$) are present alongshore from Pinellas to Lee counties, though none contain the optical characteristics of *K. brevis*.

Forecasts:

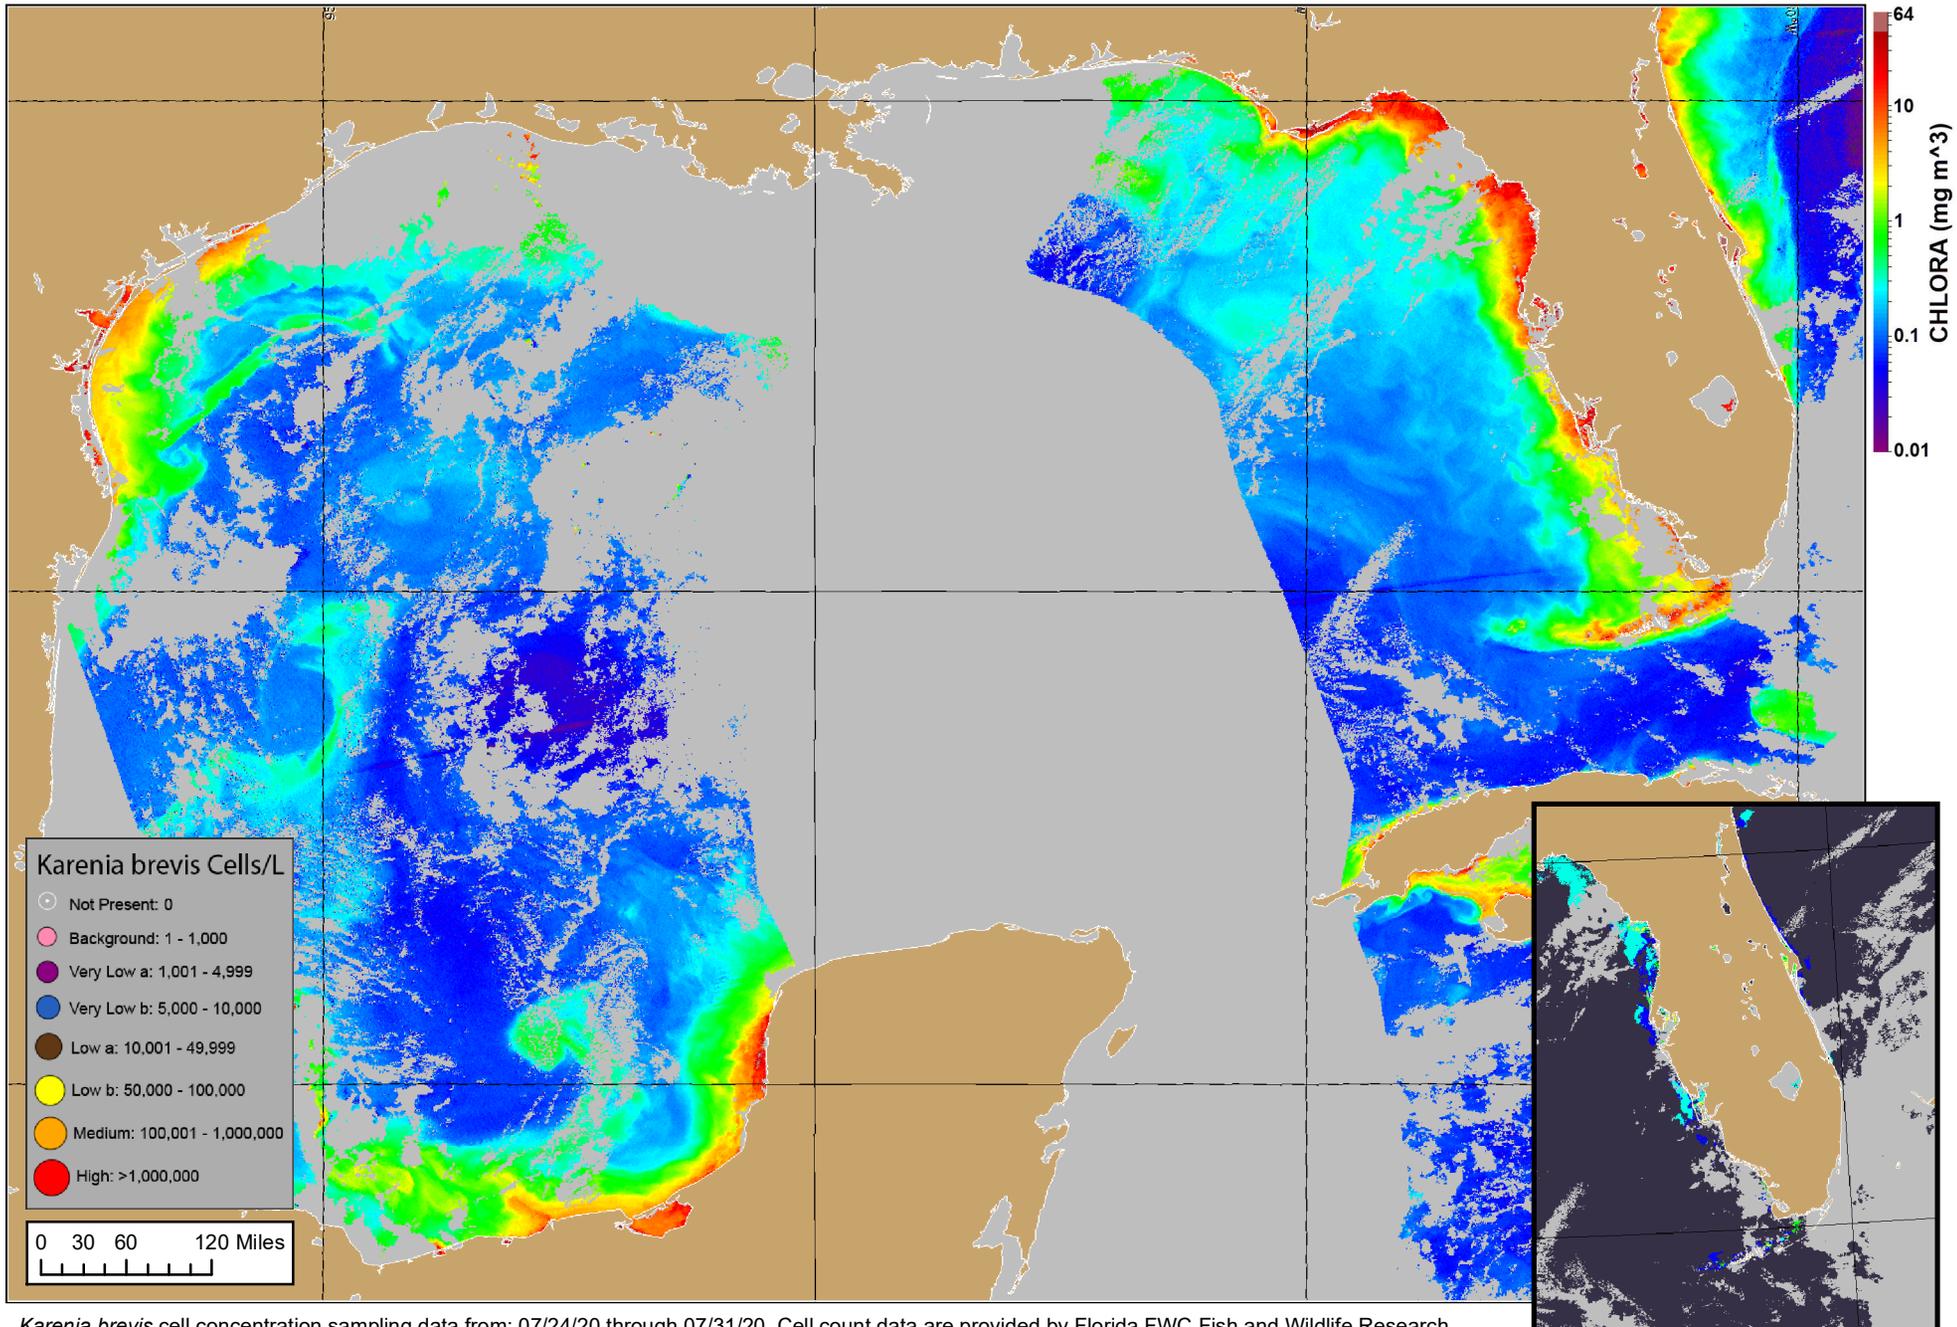

Harmful algal bloom formation at the coast of southwest Florida is not expected today through Monday, August 10. - Keeney, Davis

Karenia brevis cell concentration sampling data from: 07/24/20 through 07/31/20. Cell count data are provided by Florida FWC Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide: https://tidesandcurrents.noaa.gov/hab/hab_publication/GOMX_HAB_Bulletin_Guide.pdf. Detailed sample information can be obtained through the Florida FWC Fish and Wildlife Research Institute: <http://myfwc.com/REDTIDESTATUS>.

VIIRS satellite chlorophyll image (08/01/20) with possible *K. brevis* HAB areas shown by red polygon(s).

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS). A text summary of the marine forecast by region is available from NWS at <https://www.weather.gov/marine/stheastmz>.

Karenia brevis cell concentration sampling data from: 07/24/20 through 07/31/20. Cell count data are provided by Florida FWC Fish and Wildlife Research Institute. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide: https://tidesandcurrents.noaa.gov/hab/hab_publication/GOMX_HAB_Bulletin_Guide.pdf. Detailed sample information can be obtained through the Florida FWC Fish and Wildlife Research Institute: <http://myfwc.com/REDTIDESTATUS>. VIIRS satellite chlorophyll image (08/01/20).

Verified and suspected HAB areas shown in red. Other areas with *K. brevis* optical characteristics shown in yellow (see p. 1 analysis for interpretation).
