NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis
As of 8/31/2016 06:00 HST, water levels across the Hawaiian Islands are slightly elevated and range between 0.3 and 0.7 feet above normal tide levels. Winds are generally 20 knots or less with slightly higher gusts to 25 knots on the windward facing shores of the Island of Hawai'i and Maui. Barometric pressure is slowly beginning to fall across the Hawaiian Islands.
Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

SELECT CENTRAL PACIFIC HURRICANE CENTER ADVISORY INFORMATION:

HURRICANE MADELINE ADVISORY NUMBER 21
NWS CENTRAL PACIFIC HURRICANE CENTER HONOLULU HI
500 AM HST WED AUG 31 2016

...MADELINE WEAKENS AS IT DRAWS CLOSER TO HAWAII...
...STILL A CATEGORY ONE HURRICANE...

WATCHES AND WARNINGS
----------------------
CHANGES WITH THIS ADVISORY:

A Tropical Storm Warning has been issued for Maui County, including the islands of Maui, Molokai, Lanai and Kahoolawe.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Hurricane Warning is in effect for...
* Hawaii County

A Tropical Storm Warning is in effect for...
* Maui County including the islands of Maui, Molokai, Lanai and Kahoolawe

A Hurricane Warning means that hurricane conditions are expected somewhere within the warning area. A Tropical Storm Warning means that tropical storm conditions are expected somewhere within the watch area. Preparations to protect life and property should be rushed to completion.

For storm information specific to your area, please monitor products issued by the National Weather Service office in Honolulu Hawaii.

DISCUSSION AND 48-HOUR OUTLOOK
---------------------------------
At 500 AM HST, the center of Hurricane Madeline was located ABOUT 140 MI ESE OF HILO HAWAII and ABOUT 355 MI ESE OF HONOLULU HAWAII. Madeline is moving toward the west near 14 mph and this general motion is expected to continue for the next couple of days. On the forecast track, the center of Madeline will pass dangerously close to the Big Island later today.

Maximum sustained winds are near 80 mph with higher gusts. Steady weakening is forecast during the next 48 hours, and Madeline is forecast to weaken to a tropical storm tonight or Thursday.
Hurricane-force winds extend outward up to 10 miles from the center and tropical-storm-force winds extend outward up to 125 miles.

The estimated minimum central pressure is 988 mb.

HAZARDS AFFECTING LAND
-----------------------

WIND: Hurricane conditions are expected to develop over Hawaii County later today, continuing into early Thursday. Tropical storm conditions are expected to develop over Maui County later today, continuing into early Thursday.

SURF: Swells generated by Madeline are expected to increase in Hawaiian waters today, possibly becoming damaging along east facing shores of Hawaii County and the Island of Maui today and tonight.

RAIN: Madeline is expected to produce total rain accumulations of 5 to 10 inches, with isolated maximum amounts near 15 inches, across Hawaii County, especially over windward portions. Total rainfall accumulations of 1 to 3 inches, with isolated maximum amounts up to 4 inches, can be expected in the islands of Maui County. This rainfall may lead to dangerous flash floods and mudslides.

STORM SURGE: Depending on the track of Madeline, the combination of storm surge and tides could cause normally dry areas near the coast to become flooded. The water could reach 1 to 3 feet above ground if peak surge were to coincide with high tide. The surge would be accompanied by large damaging surf and can vary over short distances.

NEXT ADVISORY
--------------
Next intermediate advisory at 800 AM HST.
Next complete advisory at 1100 AM HST.
