As of 09/06/2016 12:00 EDT, water levels remain elevated from Ocean City Inlet, MD to Chatham, MA and range between 0.5 and 2.0 feet above tidal predictions. The highest tidal residuals being observed this morning are along the New Jersey and New York coastlines. Most areas are experiencing winds of 10-20 knots with occasional higher gusts. Barometric pressure continues to gradually fall along the coast of the northeast US.
Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

SELECT NATIONAL HURRICANE CENTER ADVISORY INFORMATION:

POST-TROPICAL CYCLONE HERMINE ADVISORY NUMBER 37
NWS NATIONAL HURRICANE CENTER MIAMI FL
1100 AM EDT TUE SEP 06 2016

...HERMINE SLOWLY WEAKENING AS IT MOVES SLOWLY WESTWARD...

WATCHES AND WARNINGS
----------------------
CHANGES WITH THIS ADVISORY:

The tropical storm warning has been discontinued for Block Island, Martha's Vineyard, Nantucket, and the coast from New Haven, Connecticut to Sagamore Beach, Massachusetts.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Tropical Storm Warning is in effect for...
* The coast of Long Island from Fire Island Inlet to Port Jefferson Harbor

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK
---------------------------------

At 1100 AM EDT, the center of Post-Tropical Cyclone Hermine was located ABOUT 110 MI S OF THE EASTERN TIP OF LONG ISLAND. The post-tropical cyclone is moving toward the west near 3 mph. A slow and erratic motion is expected for the rest of today and tonight, followed by a slow motion toward the northeast on Wednesday.

Maximum sustained winds have decreased to near 60 mph with higher gusts. Additional gradual weakening is likely during the next couple of days, and Hermine may weaken below tropical storm force by Thursday.

Tropical-storm-force winds extend outward up to 140 miles from the center.

The estimated minimum central pressure is 997 mb.

HAZARDS AFFECTING LAND
------------------------
WIND: Tropical storm conditions are expected over portions of the warning area today.
STORM SURGE: The combination of a storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters moving inland from the shoreline. Along the immediate coastline, the surge will be accompanied by large and dangerous waves.

The water could reach the following heights above ground if the peak surge occurs at the time of high tide...

Coast of Long Island from Fire Island Inlet to Port Jefferson Harbor...1 to 2 feet.

RAINFALL: Hermine is expected to produce additional light rainfall amounts not exceeding 1 inch along the mid-Atlantic and southern New England coastline from New Jersey to eastern Long Island to southeastern Massachusetts.

SURF: Large waves generated by Hermine will continue to affect the U.S. East Coast from the mid-Atlantic states through New England for another couple of days. These waves are likely to cause life-threatening surf and rip current conditions, and significant beach erosion. Please consult products from your local weather office.

NEXT ADVISORY
-------------
Next intermediate advisory at 200 PM EDT.
Next complete advisory at 500 PM EDT.
