

Tropical Depression CINDY QuickLook
 Posted: 11:00 CDT 06/22/2017

NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis

As of 06/22/2017 11:00 CDT, water levels along the Gulf Coast from southern Texas to the Florida panhandle remain elevated and range between 0.6 and 2.9 feet above normal tide levels. Winds generally range from 10 to 30 knots with gusts as high as 50 knots observed over the past several hours. Barometric pressure is beginning to rebound along the coast as the storm moves inland.

Water levels in bays and associated waterways may include impacts from hydrological forces, including rainfall runoff. For additional hydrological information see [NWS Advanced Hydrologic Prediction Services](#) or [National Weather Service Forecast Office](#). Future information on this system can be found in public advisories issued by the [Hydrometeorological Prediction Center](#).

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the [Center for Operational Oceanographic Products & Services](#) website. For more information or archived products and reports, please see the [Storm QuickLook](#) Homepage.

SELECT [NATIONAL HURRICANE CENTER](#) ADVISORY INFORMATION:

Tropical Depression Cindy Advisory Number 12
NWS National Hurricane Center Miami FL
1000 AM CDT Thu Jun 22 2017

...CINDY WEAKENS BUT HEAVY RAINS CONTINUE...

WATCHES AND WARNINGS

CHANGES WITH THIS ADVISORY:

The Tropical Storm Warning from High Island Texas to Morgan City Louisiana has been discontinued.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

There are no coastal watches or warnings in effect.

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK

At 1000 AM CDT, the center of Tropical Depression Cindy was located near about 165 MI NW of Morgan City, Louisiana. The depression is moving toward the north near 13 mph, and a turn toward the north-northeast is expected later today, followed by a turn toward the northeast on Friday. On the forecast track, Cindy or its remnants will move into southeastern Arkansas early Friday, and into Tennessee later on Friday.

Maximum sustained winds are near 35 mph with higher gusts. Additional weakening is forecast and the depression is expected to become a remnant low by Friday if not sooner.

The estimated minimum central pressure is 997 mb.

HAZARDS AFFECTING LAND

RAINFALL: Cindy is expected to produce rain accumulations of 3 to 6 inches with isolated maximum amounts up to

8 inches over extreme eastern Texas, Louisiana, and southern and eastern Arkansas through Friday morning. Additional rainfall amounts of 2 to 4 inches with isolated maximum amounts of 8 inches over southern Mississippi, southern and central Alabama, and extreme western Florida Panhandle are expected through Friday morning. This may bring storm total rainfall in excess of 15 inches in some isolated locations. This rainfall could cause life-threatening flash flooding in these areas.

Heavy rainfall will expand across the Tennessee and Ohio valleys today and across the central Appalachians Friday into Saturday. Rainfall amounts of 2 to 4 inches with isolated maximum amounts of 6 inches are expected through Friday morning.

WIND: Gusts of tropical storm force in a few squalls are still possible mainly to the east of the depression.

STORM SURGE: Inundation of 1 to 3 feet above ground level is still possible along the northern Gulf of Mexico coast in areas of strong onshore winds.

TORNADOES: A few tornadoes are possible through tonight from the lower Mississippi and Tennessee Valley regions to the central Gulf Coast.

NEXT ADVISORY

This is the last public advisory issued by the National Hurricane Center on this system. Future information on this system can be found in Public Advisories issued by the Weather Prediction Center beginning at 4 PM CDT, under AWIPS header TCPAT3, WMO header WTNT33 KWNH, and on the web at <http://www.wpc.ncep.noaa.gov>.

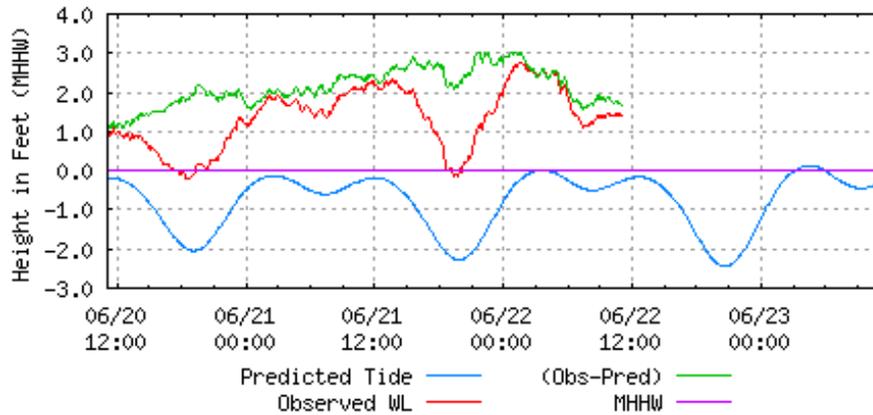

Forecaster Avila

For the purpose of timely release, data contained within this QuickLook have undergone a "limited" NOS Quality Assurance/Control; however, the data have not yet undergone final verification. All data subject to NOS verification.
