Tropical Storm BILL QuickLook, POSTED 23:00 CDT 06/16/2015

NOAA and NOAA Partnership Stations Relative to the Storm

Storm Analysis
As of 06/16/2015 23:00 CDT, water levels from southern Texas to western Louisiana are elevated and range between 1.2 and 2.35 feet above tidal predictions. Wind speeds are decreasing across the region and range between 5 and 30 knots. Barometric pressure is beginning to rebound.
Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

TROPICAL STORM BILL ADVISORY NUMBER 5

NWS NATIONAL HURRICANE CENTER MIAMI FL

1000 PM CDT TUE JUN 16 2015

...BILL EXPECTED TO SOAK PORTIONS OF TEXAS AND OKLAHOMA...

WATCHES AND WARNINGS

------------------------

CHANGES WITH THIS ADVISORY:

The Tropical Storm Warning has been discontinued west of Port O'Connor.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Tropical Storm Warning is in effect for...

* Port O'Connor to San Luis Pass Texas

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK

------------------------

At 1000 PM CDT, the center of Tropical Storm Bill was located about 45 MI N of Victoria, Texas. Bill is moving toward the north near 12 mph. This general motion is expected to continue on Wednesday with a turn to the northeast on Thursday.

Maximum sustained winds have decreased to near 40 mph with higher gusts. Weakening is forecast during the next 48 hours, and Bill is expected to become a tropical depression early Wednesday.

Tropical storm force winds extend outward up to 150 miles from the center. These winds are confined to a few rainbands to the southeast of the center.
The estimated minimum central pressure is 1000 mb.

HAZARDS AFFECTING LAND

----------------------

RAINFALL: Bill is expected to produce total rain accumulations of 4 to 8 inches over eastern Texas and eastern Oklahoma and 3 to 6 inches over western Arkansas and southern Missouri. Isolated maximum amounts of 12 inches are possible in Texas and Oklahoma. These rains may produce life-threatening flash floods.

WIND: Tropical storm conditions are occurring within the warning area, but these winds should begin to subside soon.

STORM SURGE: The combination of a storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters. The water could reach the following heights above ground if the peak surge occurs at the time of high tide...

Upper Texas and Western Louisiana coasts...1 to 2 feet

The deepest water will occur along the immediate coast to the southeast of the center. Surge-related flooding depends on the relative timing of the surge and the tidal cycle, and can vary greatly over short distances. For information specific to your area, please see products issued by your local National Weather Service forecast office.

TORNADOES: A few tornadoes may occur over parts of east-central Texas through early Wednesday.

NEXT ADVISORY

--------------

Next intermediate advisory at 100 AM CDT.

Next complete advisory at 400 AM CDT.
