Storm Analysis

As of 06/06/2016 11:00 CDT, water levels along the Gulf Coast of Florida are running from 1 to 2.25 feet above tidal predictions. Winds speeds along the west coast of Florida range between 10 and 20 knots with some gusts over 30 knots. Barometric pressure continues to fall across the region.
Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

NWS NATIONAL HURRICANE CENTER MIAMI FL
1000 AM CDT MON JUN 06 2016

...RAIN AND GUSTY WINDS BEGINNING TO REACH THE WEST COAST OF FLORIDA...

SUMMARY OF 1000 AM CDT INFORMATION

LOCATION:
ABOUT 285 MI WSW OF TAMPA FLORIDA
ABOUT 225 MI SW OF APALACHICOLA FLORIDA
MAXIMUM SUSTAINED WINDS...50 MPH
PRESENT MOVEMENT...NNE AT 16 MPH
MINIMUM CENTRAL PRESSURE...1004 MB

WATCHES AND WARNINGS

The Tropical Storm Watch from North of Altamaha Sound to South Santee River has been changed to a Tropical Storm Warning.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Tropical Storm Warning is in effect for...
* Indian Pass to Englewood
* Sebastian Inlet Florida to South Santee River South Carolina

A Tropical Storm Warning means that tropical storm conditions are expected somewhere within the warning area, in this case within 24 hours.

A Tropical Storm Watch means that tropical storm conditions are possible within the watch area, in this case within 36 to 48 hours.

Interests elsewhere along the southeastern coast of the United States should monitor the progress of Colin. Additional warnings and watches may be required for parts of this area later this morning.

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.
At 1000 AM CDT, the center of Tropical Storm Colin was estimated near latitude 27.0 North, longitude 87.0 West. Colin is moving toward the north-northeast near 16 mph. A turn toward the northeast with an increase in forward speed is expected this afternoon. A rapid northeastward motion is expected tonight and Tuesday. On this track, the center of Colin is forecast to approach the coast of the Florida Big Bend area late this afternoon or evening, move across portions of Florida and southeastern Georgia early Tuesday morning, and move near the southeastern coast of the United States later on Tuesday.

Maximum sustained winds are near 50 mph with higher gusts. Little change in strength is forecast during the next couple of days.

Tropical-storm-force winds extend outward up to 230 miles to the southeast of the center.

The estimated minimum central pressure is 1004 mb.

HAZARDS AFFECTING LAND

RAINFALL: Colin is expected to produce rainfall amounts of 3 to 5 inches with isolated maximum totals of 8 inches possible across the northeastern Yucatan peninsula, western Cuba, western to northern Florida, southeastern Georgia, and coastal areas of the Carolinas through Tuesday.

STORM SURGE: The combination of a storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters. The water could reach the following heights above ground if the peak surge occurs at the time of high tide...

Indian Pass to Tampa Bay...1 to 3 ft with slightly higher amounts possible in a few locations.
Tampa Bay south to Florida Bay...1 to 2 ft.

Localized coastal flooding and dangerous surf are possible along the Atlantic coast from Florida to South Carolina within the tropical storm warning area.

The deepest water will occur along the immediate coast. Surge-related flooding depends on the relative timing of the surge and the tidal cycle, and can vary greatly over short distances. For information specific to your area, please see products issued by your local National Weather Service forecast office.

WIND: Tropical storm conditions are expected to first reach the
Gulf coast within the warning area this afternoon, and the Atlantic coast within the warning area by early Tuesday.

TORNADOES: A few tornadoes are possible today and tonight across portions of Florida and far southern Georgia.

NEXT ADVISORY
-------------
Next intermediate advisory at 100 PM CDT.
Next complete advisory at 400 PM CDT.
