Storm Analysis

As of 09/11/2017 18:00 EDT, water levels along the Gulf Coast of Florida from Naples to Cedar Key and within Tampa Bay are running 0.5 to 4.5 feet above tidal predictions following the passage of the center of Irma.

Water levels at Apalachicola and Panama City Beach are still running 1-2 feet below tidal predictions. However, those water levels are expected to rise a bit this afternoon.
On the east coast from Trident Pier, FL northward (including the St. Johns River) up to Myrtle Beach, water levels are running anywhere from 0.5 to 4.7 feet above tidal predictions at this time.

Winds have weakened gradually across central and southern Florida this morning. The strongest wind gusts, still reaching 40 knots are observed along the northeast coast of Florida and along the Georgia coastline in the last few hours. Barometric pressure continues to fall across northern Florida and Georgia and has risen in central Florida behind the storm.

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

SELECT NATIONAL HURRICANE CENTER ADVISORY INFORMATION:

Tropical Storm Irma Advisory Number 51
NWS National Hurricane Center Miami FL
500 PM EDT Mon Sep 11 2017

...IRMA CONTINUES TO SLOWLY WEAKEN WHILE MOVING OVER SOUTHWESTERN GEORGIA...

WATCHES AND WARNINGS
---------------------
CHANGES WITH THIS ADVISORY:

The Storm Surge Warnings from Fernandina Beach southward, from the Aucilla River westward, and from Clearwater Beach southward, including Tampa Bay, have been discontinued.

The Tropical Storm Warning from the Flagler/Volusia County line to Altamaha Sound is discontinued.

The Tropical Storm Warning from north of the Suwannee River to the Okaloosa/Walton County line is discontinued.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Storm Surge Warning is in effect for...
* North of Fernandina Beach to the South Santee River
* North of Clearwater Beach to the Aucilla River

A Tropical Storm Warning is in effect for...
* North of Altamaha Sound to the South Santee River

A Storm Surge Warning means there is a danger of life-threatening inundation, from rising water moving inland from the coastline, during the next 36 hours in the indicated locations. For a depiction of areas at risk, please see the National Weather Service Storm Surge Watch/Warning Graphic, available at hurricanes.gov. This is a life-threatening situation. Persons located within these areas should take all necessary actions to protect life and property from rising water and the potential for other dangerous conditions. Promptly follow evacuation and other
instructions from local officials.

Interests elsewhere in the southeastern United States should monitor the progress of Irma.

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK
-----------------------------
At 500 PM EDT, the center of Tropical Storm Irma was located ABOUT 10 MI E OF ALBANY GEORGIA and ABOUT 150 MI S OF ATLANTA GEORGIA. Irma is moving toward the north-northwest near 17 mph, and a turn toward the northwest is expected by Tuesday morning. On the forecast track, the center of Irma will continue to move over southwestern Georgia tonight and move into Alabama on Tuesday.

Maximum sustained winds have decreased to near 50 mph with higher gusts. Continued weakening is forecast, and Irma is likely to become a tropical depression on Tuesday.

Tropical-storm-force winds extend outward up to 415 miles from the center.

The estimated minimum central pressure is 985 mb.

HAZARDS AFFECTING LAND
------------------------
STORM SURGE: The combination of a dangerous storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters moving inland from the shoreline. The water is expected to reach the following HEIGHTS ABOVE GROUND if the peak surge occurs at the time of high tide...

North of Clearwater Beach to Aucilla River...4 t 6 ft
West of Aucilla River to Ochlockonee River...1 to 3 ft
Clearwater Beach to Bonita Beach including Tampa Bay...1 to 3 ft

South Santee River to North of Fernandina Beach...4 to 6 ft
Fernandina Beach to Flagler/Volusia County line, including the St. Johns River...1 to 3 ft

The deepest water will occur along the immediate coast in areas of onshore winds, where the surge will be accompanied by large and destructive waves. Surge-related flooding depends on the relative timing of the surge and the tidal cycle, and can vary greatly over short distances. For information specific to your area, please see products issued by your local National Weather Service forecast office.

WIND: Tropical storm conditions are expected in portions of the warning area into tonight.

Rainfall: Irma is expected to produce the following rain accumulations through Wednesday:

South Carolina and north-central Georgia and Alabama into the southern Appalachians...3 to 6 inches with isolated 10 inches.
Northern Mississippi and southern portions of Tennessee and North Carolina...2 to 4 inches.

TORNADOES: Isolated tornadoes are possible tonight along the South Carolina coast.
SURF: Swells generated by Irma are affecting the southeast coast of the United States. These swells are likely to cause life-threatening surf and rip current conditions. Please consult products from your local weather office.

NEXT ADVISORY
-------------
Next intermediate advisory at 800 PM EDT.
Next complete advisory at 1100 PM EDT.
